KSS-213C/KSS-213Q LASER ASSEMBLIES

This document shows the differences in the two laser assemblies that are used in the following units:

CDG-4000	KSS-213C/KSS-213Q
CDG-8000	KSS-213C/KSS-213Q
CDG-8800	KSS-213C/KSS-213Q
CDG-9000	KSS-213C/KSS-213Q
DKP-10G	KSS-213C/KSS-213Q
GIG-MAN/+	KSS-213C/KSS-213Q

Laser Assemblies
When somebody wants to order a laser assembly for one of the above units, you must first find out which assembly they need. Below the 2 above-mentioned laser assemblies are pictured.

Desolder Points
When these laser assemblies are shipped to us, they are shipped with some protective soldering that needs to be desoldered before installing. It is important to let those who are ordering a laser assembly this prior to shipping them out. The desolder points are illustrated below.

To complete an order:

1) Check the above list of units and compatible laser assemblies to determine which assemblies are compatible.

2) Have the technician pull out the laser assembly and check which version is required by viewing the pictures below to identify.

3) Make sure that the technician is aware of the desolder point. If they have done desoldered a laser assembly before, instruct them to save the old laser assembly for comparison to see what a desoldered laser assembly looks like.
